

Baixue (Doris) Zhang

San Carlos, CA | (209) 594-9194 | baixue.zhang@sjsu.edu | LinkedIn | Portfolio

Education

San Jose State University (SJSU), San Jose, CA Aug 2024 – May 2026
M.S. in Statistics, GPA: 3.91
Relevant Coursework: Probability Theory, Mathematical Statistics, Regression Analysis, Time Series, Experimental Design, Data Visualization, Machine Learning Topics, Markov Models, Stochastic Processes, Cluster Analysis.

Certifications and Awards

Beverly L. Mecklenburg Scholarship – SJSU, Dept. of Mathematics & Statistics (Oct 2025)
Merit-based departmental award recognizing academic excellence in mathematics and statistics.
Outstanding Achievement Award – Chinese American Biopharmaceutical Society (CABS) (Aug 2025)
Awarded for outstanding performance during summer internship, with work highlighted in CABS magazine.
SOA Exam P (Probability) (Jan 2025)

Skills and Tools

Python, SQL, R, ETL | Pandas, NumPy, Scikit-learn | Tableau, Excel | Time Series Analysis, Multivariate Analysis, Cluster Analysis | Machine Learning, A/B Testing | LLM Evaluation, Prompt Engineering | Flask, REST APIs

Work Experience

Data Analyst Intern, IDX Exchange *Python, Tableau, APIs, ETL* May 2026 – Present

- Built Python workflows to extract monthly MLS sold/listing data via APIs, clean and preprocess data, and create Tableau-ready datasets.
- Created Tableau dashboards for market analysis, competitive analysis, and agent/office rankings using production-style reporting pipelines.

Data Science Intern, Venera AI *Python, Azure, REST APIs, LLMs* May 2026 – Present

- Built an AI-powered onboarding chatbot integrating Slack, GitHub, Linear, Figma, Canva, and Google Drive, enabling new hires to query internal knowledge, accelerate onboarding, and help reduce training costs.
- Deploy a sleep model by preparing physiological time-series data, transforming heterogeneous datasets to match model input requirements, and handling missing values and feature encoding for disease prediction.

Data Science Team EC Member, CABS *Git/GitHub, WordPress, Workshops* Aug 2025 – Present

- Maintained the CABS website, supported the Summer Internship Program, and delivered Git/GitHub workshops.

Data Science Summer Intern, CABS *Python, Gemini API, Clinical Data* Jun 2025 – Aug 2025

- Developed two AI-powered agents, EfficacyLens and DataCraftAgent, and shared the projects via GitHub.
- Collaborated with biology domain experts to improve clinical trial accuracy and domain-specific reliability.

Teaching Associate, San Jose State University *Calculus, Communication* Jan 2025 – May 2026

- Led undergraduate Calculus workshops in person and on Zoom, supporting students with problem-solving strategies and core concepts.

Selected Projects

EfficacyLens AI Agent (CABS) *Python, Gemini API, Streamlit, Flask* Summer 2025

- Developed an AI-driven analytics tool to compare clinical trials, automating extraction of trial design, endpoints, and efficacy outcomes from PDFs of Biopharmaceutical articles.
- Designed structured reasoning workflows to translate user queries into comparable evaluation criteria, enabling consistent cross-trial analysis.
- Reduced manual analysis time from hours to minutes, enhancing speed and accuracy of comparative analysis.

CAMCOS Wildfire Project (SJSU, WIRC) *Generalized Linear Mixed Models, R, LaTeX* Fall 2025

- Modeled a real-world wildfire dataset using Generalized Linear Mixed Models (GLMMs).
- Led the creation of Monte Carlo simulations in R to quantify sampling-design trade-offs and strengthen statistical conclusions; used the simulations to investigate problems like singularity and Simpson's Paradox.
- Delivered a paper report, a CAMCOS presentation with the team, and actionable recommendations for future data collection strategy, showing that increasing the number of sites improves statistical significance more efficiently than increasing houses per site.
